WOMEN’S UNIVERSITY COMPLAINT REPORTING STYSTEM

SOFTWARE ENGINEERING

WEEK 4: REQUIREMENTS AND USE CASE MODELING

USE CASE DESCRIPTIONS

Use Case 1: Submit a Complaint

Use case name: Submit a Complaint

Actor: Student

Description: This use case describes how a student submits a complaint through the Women's University Complaint Reporting System.

Preconditions

The complaint reporting system is available.

The student can access the complaint submission form.

Main flow

1. The student opens the complaint reporting system.
2. The student selects the option to submit a complaint.
3. The system displays the complaint form.
4. The student enters their name and email address.
5. The student selects a complaint category.
6. The student enters a description of the problem.
7. The student submits the form.
8. The system validates the information.
9. The system saves the complaint.
10. The system displays a confirmation message.

Alternative flows

If required information is missing, the system asks the student to complete the missing fields.

If the information is invalid, the system asks the student to correct it

If the complaint cannot be saved because of a technical problem, the system displays an error message.

Postconditions

The complaint is saved in the system if submission succeeds.

The student receives confirmation of successful submission.

Use Case 2: View Submitted Complaints

Use case name: View Submitted Complaints

Actor: Administrator

Description: This use case explains how an administrator views complaints submitted by students.

Preconditions

The complaint reporting system is available.

The administrator has permission to view complaints.

Main flow

1. The administrator opens the system.

2. The administrator signs in, if authentication is implemented.

3. The administrator selects the complaints section.

4. The system retrieves the submitted complaints.

5. The system displays the complaints.

6. The administrator selects a complaint to view its details.

7. The system displays the selected complaint's information.

Alternative flows

If no complaints have been submitted, the system displays a message indicating that no complaints are available.

If the system cannot retrieve the complaints, it displays an error message.

Postconditions

The administrator can view the available complaints and their details.

The complaint information remains unchanged unless the administrator performs another action.

Use Case 3: Track Complaint Status

Use case name: Track Complaint Status

Actor: Student

Description: This use case explains how a student checks the progress of a previously submitted complaint.

Preconditions

The complaint has been submitted successfully.

The student has the information required to identify and access their complaint.

Main flow

1. The student opens the complaint reporting system.

2. The student selects the option to track a complaint.

3. The system asks for the required complaint identification information.

4. The student enters the information.

5. The system searches for the complaint.

6. The system retrieves the complaint's current status.

7. The system displays the status to the student.

Alternative flows

If the student enters incorrect identification information, the system displays an error message.

If the complaint cannot be found, the system informs the student.

If the system cannot retrieve the status because of a technical problem, it displays an error message.

Postconditions

The student can see the complaint's current status if the complaint is found and access is authorised.

The complaint record remains unchanged.
